

Updating obesity surveillance using the NCCOR Catalogue

David Simmons, MPH

Minnesota Department of Health
Physical Activity, Nutrition and
Obesity Program

Background

- Minnesota Obesity Plan implemented in 2008
- Obesity Plan Epidemiologist position open from 2009 to 2010
- Started in June 2010 – hit the ground running!

My charge

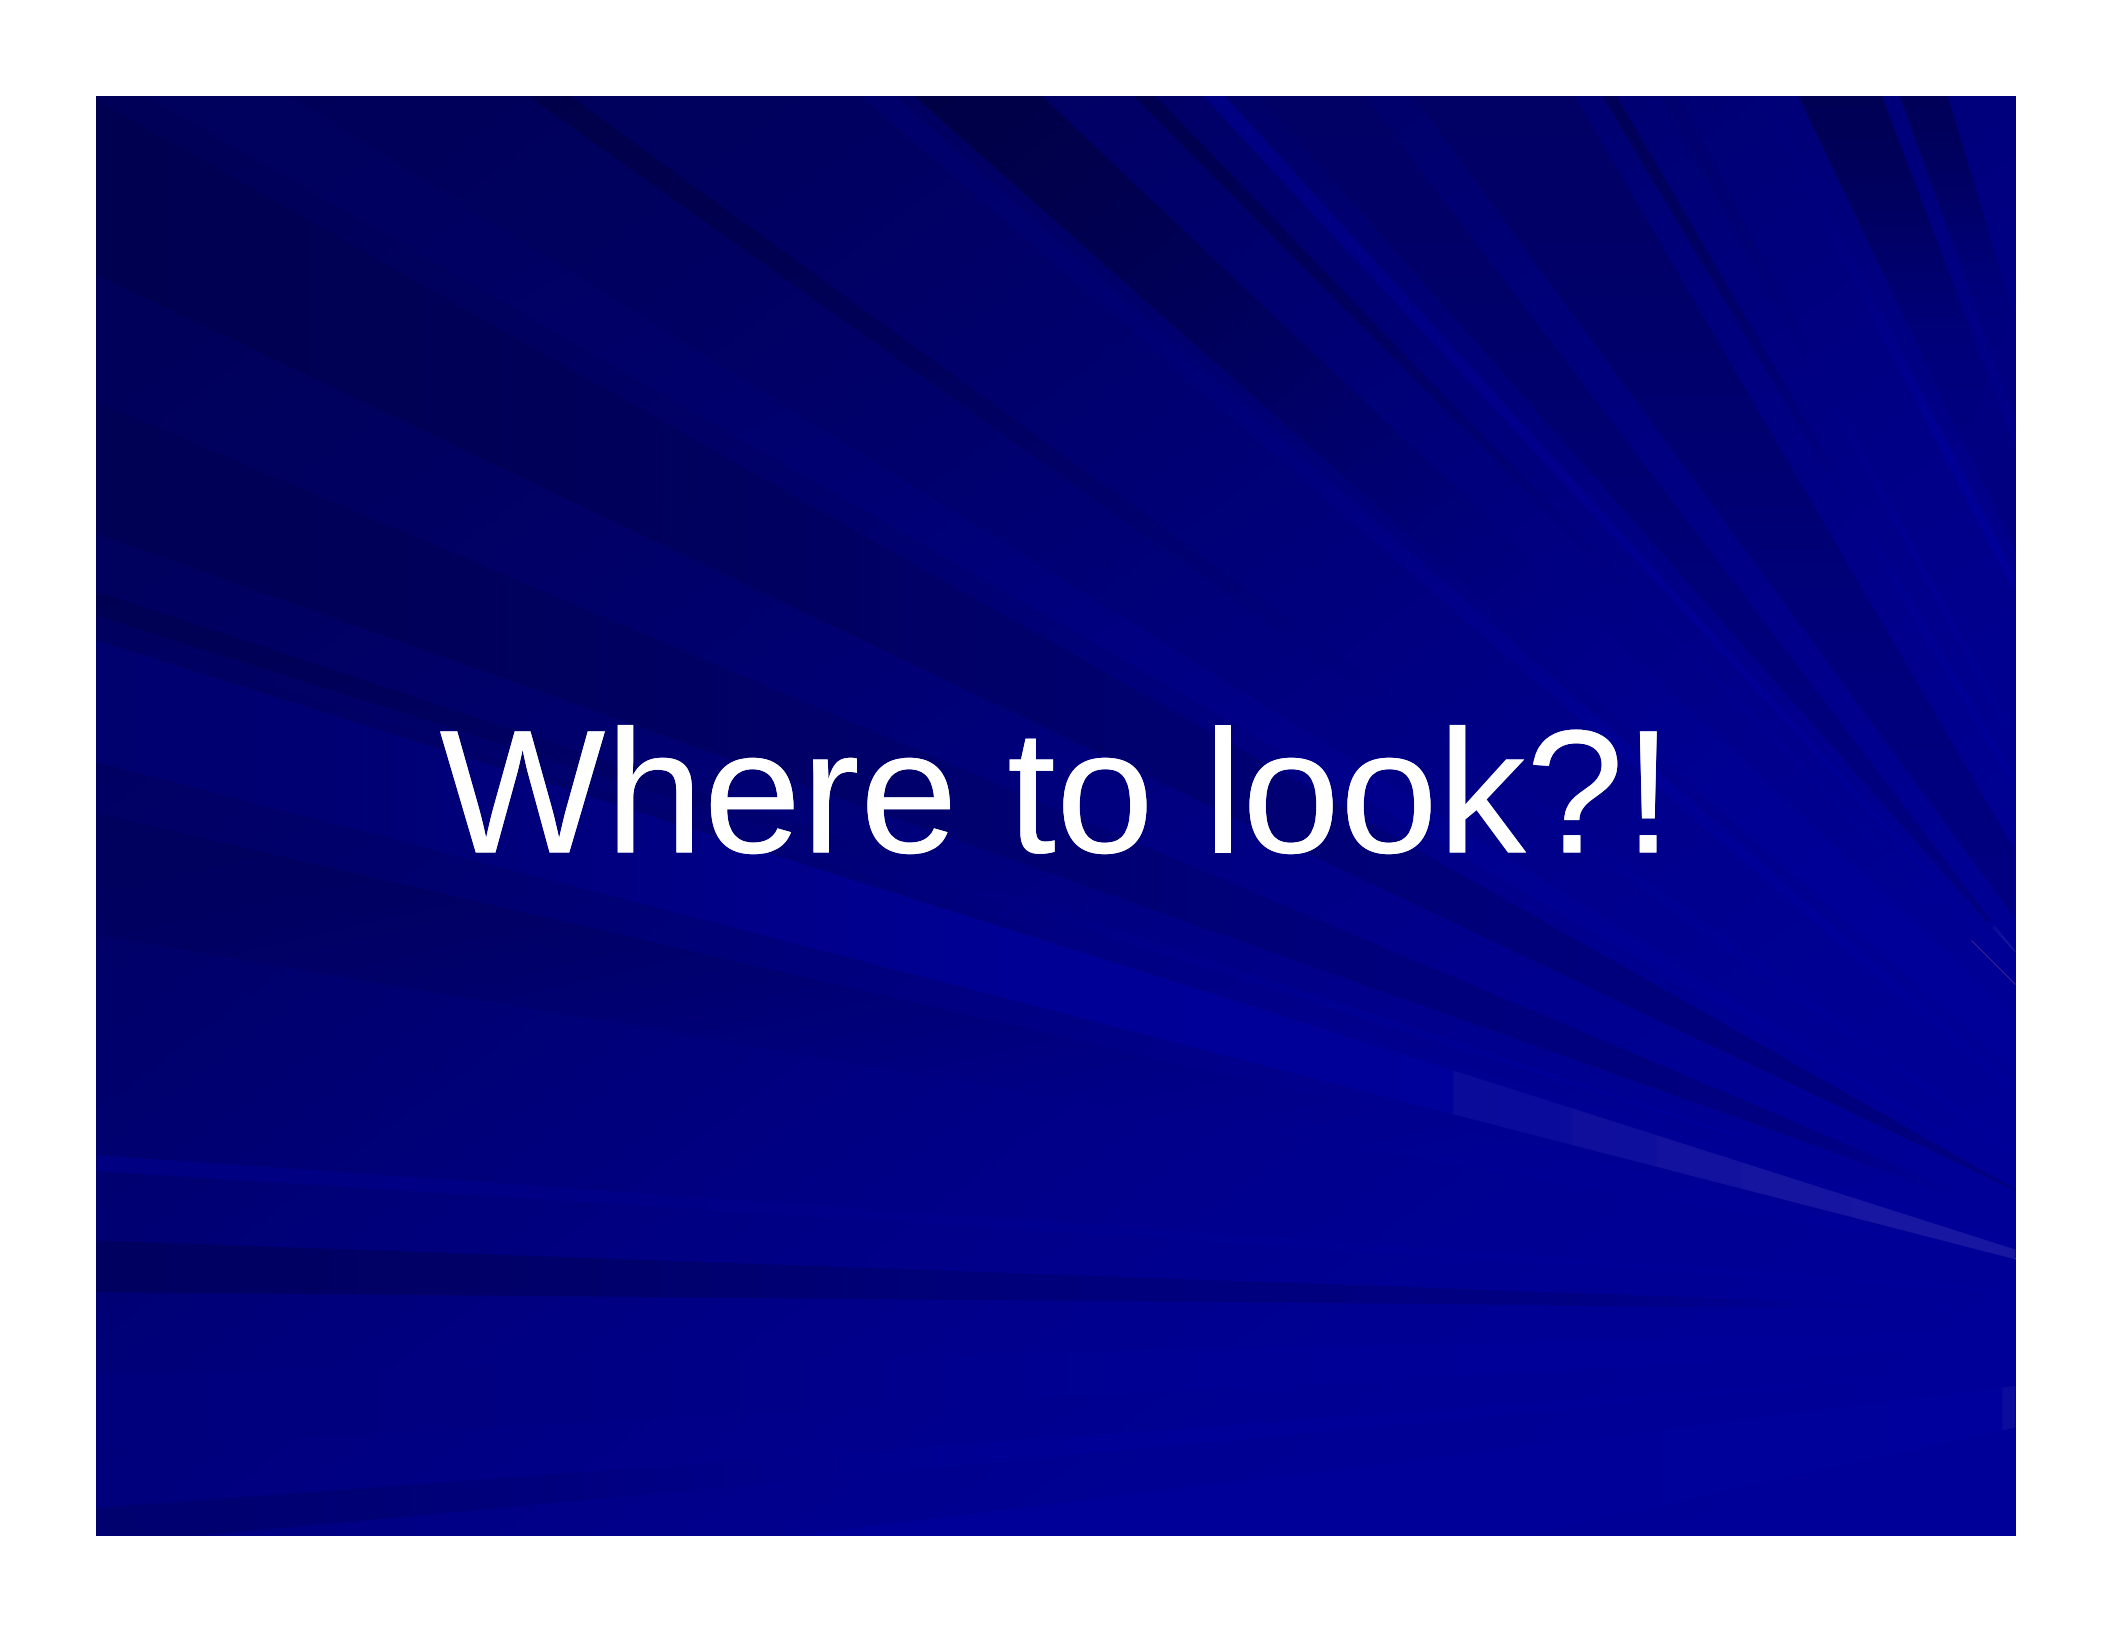

- Evaluate the Minnesota Obesity Plan surveillance system to date
- Implement changes to surveillance indicators based on findings
- Accommodate new state health initiative in system!

The new normal

- In 2009 Minnesota started a series of interventions designed to prevent obesity “upstream”
- My surveillance recommendations must include “non-traditional” data

State Health Improvement Program (SHIP)

- SHIP implemented one year after Obesity Plan
- Surveillance – measure changes at the local level
- Surveillance data sources that address:
 - Obesity
 - Physical Activity
 - Nutrition

The background is a solid dark blue color with a pattern of diagonal lines in varying shades of blue, creating a sense of depth and movement. The lines are more prominent on the right side and fade towards the left.

Where to look?!

NCCOR Catalogue: a unique source

- Catalogue offers data sources at national, state and community level
- Filtering allows focus on key areas
- Comparison feature provides for assessment of key similarities and differences

WOW!

Example: Physical activity

- Check

- √ Physical activity

- √ State

- √ School age children

- Compare: BRFSS, NSAF, NSCH, and SHPPS

- NSCH and SHPPS data have potential

National Survey of Children's Health (NSCH)

- State profile for Minnesota
 - Breastfeeding
 - Screen time
 - Neighborhood amenities
- Next steps are to evaluate sources for these data points

School Health Policies and Practices Study (SHPPS)

- State Report Card for Minnesota
 - Physical Education and Activity
 - Nutrition Services
- Next steps are to compare the data provided to state initiatives

The background is a solid dark blue color with a pattern of thin, lighter blue diagonal lines running from the top-left towards the bottom-right.
