NCCOR
### National Collaborative on Childhood Obesity Research

HOW TO USE NCCOR'S MEASURES REGISTRY RESOURCE SUITE

Are you working on an upcoming grant proposal?

Consider using NCCOR's Measures Registry Resource Suite to strengthen your proposal.

MEASURES REGISTRY RESOURCE SUITE

- Individual Diet
- Individual Physical Activity
- Physical Activity Environment
- Food Environment

NCCOR has three Measures Registry resources: the Measures Registry itself, and the Measures Registry User Guides and Measures Registry Learning Modules, which provide information on navigating the registry and help you understand the four domains and measurement.

Example: **You are writing a proposal for a school-based obesity prevention intervention attempting to change à la carte offerings in high school cafeterias.**

HERE'S WHAT YOU DO:

1. Review the Measures Registry User Guide and Learning Modules on the Food Environment to learn about important considerations when choosing measures for the food environment.

2. Next, using the Measures Registry, enter "schools" in the search box and filter on the Food Environment domain and children aged 12-18.

3. You'll see about 65 potential articles at your disposal.

4. Scan the titles. You'll see an "Inventory or Checklist for Middle School and High School A La Carte Food Environments" and a "School Food Checklist" that might be good options.

5. Check the boxes to the right and click "compare" to see a side-by-side comparison of the two measures. Now you can determine which one is best for your purposes.

6. You'll see that while both measures are examined for validity and reliability, the "School Food Checklist" is available in the registry and also tested in multiple age groups and genders.

7. You choose to use the "School Food Checklist" in the measures section of your grant proposal! Great work!

As you can see, using NCCOR's Measures Registry Resource Suite is **fast, easy,** and **efficient.**
